NQ Scalper Strategy Rules

1. Open a chart and load on the NQ Volatility Bar type and NQ Scalper

    1. Body Size (tick): 8

    2. Backtest Mode: 2 (off)

    3. Minimum Timespan (sec): 1

    4. Tick Replay: unchecked (off)

2. Diagram the market on a higher timeframe (preferably 60 min.) and mark key levels on your Volatility Bar Chart

    1. Fibonacci retracements can also be used

3. Wait for the NQ Scalper to provide a signal in between levels or a long signal at a support level or short signal at a resistance level

    1. Do not take a short signal at support or a long signal at resistance

4. Entry will be as soon as a signal is generated

5. Stop Placement:

    1. Longs: will be placed a couple ticks beyond the low of the entry bar

    2. Shorts: will be placed a couple ticks beyond the high of the entry bar

6. Target is 2R or simply the next level
